Adults, Data and emerging Identities Project Launch

The AUDID adult education project on online identities kicked off in November 2018 in Rijeka. The project will last two years, and the objective is to empower adults to deal effectively with issues associated to online identities, cryptocurrencies and e-wallets.

AUDID will develop a toolkit to:

- An interactive curriculum and a pedagogical approach to enhance critical thinking, complemented by easy to use tools (i.e. a dynamic demonstrator) that will enhance understanding on the subject and recognize skills and achievements through the OPEN BADGES concept (openbadges.org).
- A virtual Academy space, a single entry point to all the resources and tools of the training program complemented with support for newcomers through the AUDID networks of educators, users and enthusiasts.

" Adults today spend plenty of time online and as a result they are exposed to dangers because of not being able to fully comprehend how random data they make public can manifest into the building blocks of an online identity.

Adults, especially those aged 55 or older, should learn to appreciate the relevance of data, both data they provide and data they receive."
